

FAMILYLIFE IS WIRED (AND WIRELESS) FOR SUCCESS.

IK Electric is proud to help the creation of FamilyLife's new \$11.3 million International Headquarters, a showplace on Highway 10.

Electrical Contracting

IK provided pre-construction budgeting, value-engineering to the builder (ICI, Inc., Dallas) and installed a custom-designed electrical system.

Outside Plant Infrastructure

Working with the utility company, IK built a two-and-a-half-mile aerial/underground fiber optic backbone extension along highway 10 to provide high-speed Internet and voice capabilities to the new facility.

Networking Services

Working with FamilyLife's IT department, IK designed, supplied and installed a converged technology solution, including:

- An ultra-high-speed CAT 5e and fiber optic cabling system;
- A complete CISCO SYSTEMS multi-layer switching infrastructure with broadband wireless for mobile connectivity throughout the facility.

Imagine what IK can do to get your company wired (and wireless) for success.
